Pre-Calculus Parent Functions IV

Translations Abstracted

$y_1 = f(x)$		$y_2 = f(x) + 2$	
$y_3 = f(x) - 2$		$y_4 = f(x + 2)$	
$y_5 = -f(x)$		$y_6 = f(x - 2)$	
$y_7 = f(-x)$		$y_8 = -f(-x)$	
$y_9 = f(x - 2) + 2$		$y_{10} = -f(x + 2)$	

Transformations are officially *translation* (“slide”), *reflection* (“flip”), and *rotation* (“spin”).

Graphs of the trigonometric functions (sine, cosine, tangent) will help introduce a fourth, *shear* (shrink/magnify).
